

Method and Apparatus for Monitoring Electrical Usage

Abstract of Disclosure

A system for monitoring electricity usage is provided. The system includes a monitoring device having a meter connected to a current transformer and a communications device. The communications device allows transmission of electrical usage information to a server. The data is communicated to the server where it is stored and analyzed to create reports such as demand profile and billing verification.

Figures

Figure 1: A vertical strip of text, likely a page number or a small figure, located on the left margin. The text is rotated 90 degrees counter-clockwise and is mostly illegible due to the orientation and low resolution. It appears to contain the number '14' at the top and 'Page' at the bottom.
